Veterinary Targets for IVD Research & Development

Reliability

Accurately detecting and quantifying target analytes in animal samples is essential for investigating the mechanisms of disease and developing effective treatments - either for the animal in question or by translating experimental results into human. Immunoassays such as Western blot, immunocytochemistry, and ELISA are widely used for these types of studies, where high quality reagents are critical for generating reliable results.

Quality Assured

ICL is a trusted supplier of antibodies, ELISA kits, and protein reference standards to many of the world's leading research institutions, pharmaceutical companies, and *in vitro* diagnostics (IVD) manufacturers. Established over 40 years ago in Oregon, USA, we develop and manufacture our products in-house using internal gold standard controls for validation, assuring our partners of consistent batch-to-batch performance, reliable long-term supply, and expert technical support from a team who knows our portfolio inside out.

Comprehensive Range

Our growing range of veterinary products includes antibodies for targets across multiple species, which are frequently available from several different hosts and form the basis of our ready-to-use sandwich ELISA kits. We also offer a selection of protein reference standards, in addition to core assay reagents like sera, streptavidin conjugates, and antibodies to common epitope tags.
