Antibodies for Every Project

Secondary antibodies play a pivotal role in augmenting the signal of primary antibodies. Boosted signals facilitate the visualization and quantification of specific antigens within biological samples using immunohistochemical and immunocytochemical techniques.
At ICL, we take pride in offering an expansive catalog of secondary antibodies designed for both human and animal research. Just like our diverse array of primary antibodies and ELISA kits, our secondary antibodies are meticulously manufactured within the USA and subjected to rigorous quality and consistency testing, guaranteeing dependable and reproducible results for your experiments.

Unparalleled Quality

ICL is a trusted supplier of antibodies and ELISA kits to many of the world's leading research institutions, pharmaceutical companies, and in vitro diagnostics (IVD) manufacturers. Established over 40 years ago in Oregon, USA, we develop and manufacture our products in-house using internal gold standard controls for validation, assuring our partners benefit from consistent batch-to-batch performance, reliable long-term supply, and expert technical support from a team who knows our portfolio inside out.
