Potent Targeting Capabilities

Precisely identifying and measuring target analytes in animal samples is crucial for understanding disease mechanisms and devising effective treatments, whether for the animal itself or for applying experimental findings to humans. Immunoassays such as western blot, immunocytochemistry, and ELISA are widely used for these types of studies, where high-quality reagents are critical for generating reliable results.

Trusted Quality

ICL is a U.S.-based supplier of antibodies, ELISA kits, and protein reference standards to many of the world's leading research institutions, pharmaceutical companies, and in vitro diagnostics (IVD) manufacturers. Established over 40 years ago in Oregon, we develop and manufacture our products in-house using internal gold standard controls for validation, assuring our partners benefit from consistent batch-to batch performance, reliable long-term supply, and expert technical support from a team who knows our portfolio inside out.

Comprehensive Catalog

Our growing range of veterinary products includes antibodies for targets across multiple species, which are frequently available from a variety of hosts and form the basis of our ready-to-use sandwich ELISA kits. We also offer a selection of protein reference standards, in addition to core assay reagents like sera, streptavidin conjugates, and antibodies to common epitope tags.
