## Inhibitors & Agonists

25,000+ selective Inhibitors and Agonists  
Targeting 375 key proteins in 20+ signaling pathways  
Applications in different disease areas

## Screening Libraries

MCE Compound Screening Libraries consist of  
10,000+ small molecules with  
validated biological and pharmacological activities

### Quality

Our robust quality control methods assure  
product high quality and purity.

### Experience

We track the latest scientific innovations and  
provide you access to the newest compounds.

### Validation

Our products biological activities are validated  
by worldwide customers and published in the  
top scientific journals.

### Partner

We work together with renowned research  
institutes and pharmaceutical companies.

# Antibody-drug Conjugate/ADC Related

The **antibody-drug conjugate (ADC)** is a humanized or human monoclonal antibody conjugated with highly cytotoxic small molecules (payloads) through chemical linkers. ADCs increase the cell-killing potential of monoclonal antibodies (mAbs), and confer higher tumor selectivity. Some ADCs has been approved by FDA.

# PROTAC

PROTACs or Proteolysis Targeting Chimeric Molecules are heterobifunctional nanomolecules that theoretically target any protein for ubiquitination and degradation. PROTACs consist of one moiety which is recognized by the E3 ligase. This moiety is then chemically and covalently

to a small molecule or a protein that recognizes the target protein. The trimeric complex formation leads to the transfer of ubiquitins to the target protein.

PROTAC has a desirable feature that combine several aspects of the small molecule, antibody and RNAi :

- The ability to target the undruggable proteome.
- Overcoming the accumulation of the drug target.
- Drug target alterations: mutations and binding partners.
- Gain of specificity with PROTACs.
- Catalytic nature of PROTACs.
- Event driven pharmacology and prolonged PD effect.

# Compound Screening Libraries (96- or 384-well)

Our **ready-to-use** MedChemExpress (MCE) compound libraries consist of **over 10,000** small molecules with validated biological and pharmacological activities. They are available for **high-throughput screening (HTS)** and **high-content screening (HCS)**. Compound libraries are useful professional tools for **drug discovery and new indication research**.

- **Safety and effectiveness** have been confirmed by literature, patent reports and clinical research. Many products are **FDA-approved**.
- Focuses on hundreds of targets that are **key components** in the fields of GPCR, kinase, anti-cancer, epigenetics, stem cellbiology, etc.
- Up-to-date with **the latest medical molecule** developments and offers access to our exclusive **Drug Repurposing Compound Library**.
- Provides detailed **biological and chemical information** on every compound together with the LC/MS and NMR reports to **ensure high quality**.

We offer **over 300 exclusive compounds worldwide** and track the latest scientific innovations to give our customers access to **the newest small molecules**. We are dedicated to providing high-quality small molecules to our customers around the world.

# Virtual Screening

**Virtual Screening** is a computational technique used to search libraries of small molecules in order to identify those structures which are most likely to bind to a drug target. Nowadays, it has become a crucial step in early-stage drug discovery.

- A fast tool for drug design.
- Ligand-based and structure-based virtual screening.
- Super high-performance computer.
- Professional molecular simulation team.
- Competitive price.
- Database containing over **4 million** purchasable compounds.
- Privacy information management system.

Databases and compounds are provided by Enamine, LifeChemicals, Specs and Chemspace.

HY-L0058V	GPCR Library	54,080	Designed for the discovery of new GPCR ligands.
HY-L0059V	Allosteric GPCR Library	14,535	A sub-library of Enamine's GPCR Library designed for the discovery of novel allosteric ligands.
HY-L0060V	Lipid GPCR Library	5,632	A sub-library of Enamine's GPCR Library designed for the discovery of novel lipid GPCR ligands.
HY-L0070V	IDO Targeted Library	5,502	IDO focused library designed by a combination of structure- and ligand-based methods.
HY-L0067V	Immuno-Oncology Library	52,935	Designed for the discovery of novel hits in Immuno-Oncology therapeutic area.
HY-L0064V	Ion Channel Library	36,800	Designed for the discovery of new Ion Channels ligands.
HY-L0071V	JAK/STAT Compound Library	1,390	JAK/STAT Compound Library was designed to be a universal tool to search potential JAK-STAT pathway modulators.
HY-L0061V	Kinase Library	64,000	Designed for the discovery of novel protein kinase inhibitors.
HY-L0062V	Kinase Hinge Binders Library	22,720	Kinase inhibitors targeting ATP binding pocket; designed using ligand-based methods.
HY-L0063V	Allosteric Kinase Library	4,800	Carefully selected molecules via docking and visual evaluation.
HY-L0068V	Kynurenine Pathway Library	12,300	The kynurenine pathway library is composed of 12,300 new potential active compounds for the kynurenine pathway.
HY-L0080V	Lipoxygenase Library	1,388	A set of LOXs inhibitors designed using docking and 2D similarity search.
HY-L0081V	Molecular Chaperones Library	2,451	A set of compounds targeting molecular chaperones; designed by ligand-based methods.
HY-L0082V	Nucleoside Mimetics Library	271	A set of Nucleoside Mimetics.
HY-L0083V	Protein Mimetics Library	8,960	A set of 8,960 compounds targeting alpha-helix and beta-turn domains.
HY-L0066V	Protein-Protein Interaction Library	40,640	Designed for the discovery of novel PPI inhibitors.
HY-L0084V	RNA Library	9,070	Library of compounds capable of binding to RNA.
HY-L0069V	Serine Hydrolase Library	12,040	Library of precisely selected compounds able to form covalent bonds with catalytic serine residue.
HY-L0085V	Tubulin Library	3,454	Library of potential tubulins ligands.

# Dye Reagents

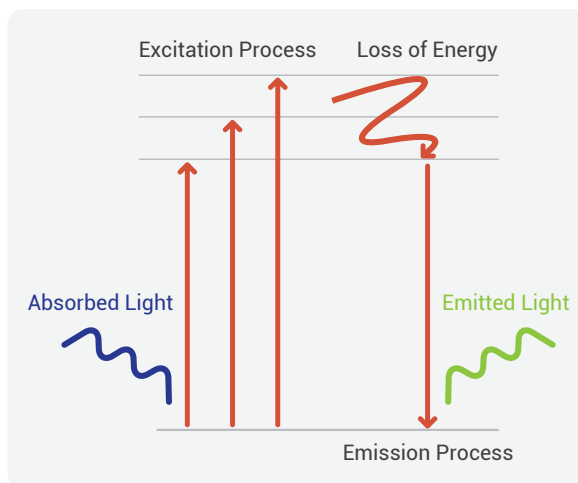

**Dye Reagents** are a class of aromatic hydrocarbons and heterocyclic compounds that can be excited through photoexcitation-fluorescence groups and emit fluorescence.

## Applications:

- Immunofluorescence, fluorescent probes, cell staining, ion indicators;
- Specific DNA staining, for chromosome analysis, cell cycle, apoptosis and other related research;
- Multiple staining makes it possible to assess the topographic relationship of different targets.

## Advantages:

- High sensitivity
- High selectivity
- Cost-effective choice
- Strong technical support
